

Avacorp Secure Online Backup

OFFSITE STORAGE

With online backup, you don't have to deal with the bulk of the tape backups or the manual process of storing them for offsite emergency.

SCALABLE

Backup as many computers as you need using one account. All of the PCs in your business are simply managed; no juggling multiple accounts!

OFFSITE AVAILABILITY

All data you have backed up can be accessed from any browser! Because your data is being backed up online, you can access your data anywhere in the world by simply going online. Never be without a critical file again.

Avacorp, Inc.

With all of today's possibilities for data loss and the increasing number of computer attacks, how much computer security is enough?

Security measures are taken to protect our data from malware, hardware failure or disasters because it is cheaper to protect your data than it is to lose it.

Hardware continues to be inherently doomed to failure because of moving parts—not if but when—so backing up information to a local drive is not a guaranteed way to have your data protected. Drives can easily be stolen. Not only does our service keep your data secure offsite, but it makes your data available offsite.

Offsite availability means rather than being solely a preemptive move against malice, natural disasters, user error or hardware failure,

- 42% of reported data loss is due to **Hardware Failure** that is inherent in today's hard drives.
- 30% is due to **Human Error**, ease of use and being able to recover older versions is key.
- 13% of data loss is due to **Software Error**.
- Only 7% is due to **Malware and Viruses!**

Our service creates an active backup accessible to the account holder from any web browser and allows for secure file-sharing via email.

Backup data shouldn't be a stagnate file cabinet, tape or drive that collects dust and takes up valuable space—data should be readily accessible, and Avacorp provides that kind of accessibility while maintaining its security.

All of your backups/recoveries can be handled remotely. No longer must you wait for a technician to arrive onsite to handle your tape backups/restores (just to find that the tape backup has failed). With Avacorp, you get a peace-of-mind knowing that your backup worked and your data is secure.

The question: How much would it cost if you lost all of your vital data?

The answer: More than the cost of prevention.
